Hi Ramakrishna,

As discussed. Please find the attached coding assignment, You can design & develop a solution and send it back to us in a zip format.

Note:

It is important to note that we are not assessing you on the capabilities around code required to do the Input/Output. The focus is on the overall design. So while building a solution, it would be nicer if the input to the problem is provided either via unit tests or an input file. Using the command line for input can be tedious and difficult to test, so it is best avoided.

We are here to make your interaction smooth with you, so if you have any questions around details of the interview process, technical rounds or nature of questions do feel free to reach out to us!

Some of the books that we at Sahaj like are listed below. We think following topics/books can add tremendous value to programming skills and sensibilities of a developer. Do feel free to check them out. Do note, reading them is not a requirement for our interaction with you, and are purely listed for individual interest.

- Clean code handbook - as listed [here](#)
- Domain driven design - as listed [here](#)
- Pragmatic programmer - as listed [here](#)
- Refactoring: Improving design of existing code - listed [here](#)
- Design Patterns head first - as listed [here](#)

--

Regards,
